1. Executive Summary

This report presents a comprehensive performance analysis of restaurants listed on Swiggy and Zomato across 10 major Indian cities. Using 13 structured SQL queries and a Power BI dashboard with 6 charts, 4 KPIs, and 4 interactive slicers, the analysis covers revenue, profitability, ratings, delivery efficiency, cuisine popularity, market share, and commission impact.

Key findings at a glance:

- Cloud Kitchens dominate on Swiggy with a 64.6% market share — the highest of any restaurant type.
- Zomato leads in overall wins across most cities including Mumbai, Bangalore, Hyderabad, and Pune.
- Delhi is Swiggy's strongest city, where it outperforms Zomato in platform wins.
- Luxury segment restaurants earn an average combined profit of ₹4.15 lakhs — over 7x the Budget segment.
- Biryani and Street Food are the top cuisines by total monthly orders across both platforms.
- Both platforms show near-identical delivery times across all distance buckets.
- Higher discount frequency is associated with more orders but does not significantly increase profit margins.

2. Project Scope & Methodology

2.1 Dataset Overview

The analysis is based on a single unified dataset table named SWIGGY_VS_ZOMATO containing restaurant-level data across 10 Indian cities: Mumbai, Delhi, Bangalore, Hyderabad, Pune, Chennai, Kolkata, Ahmedabad, Jaipur, and Lucknow.

Attribute	Details
Total Records	2,500 restaurants
Cities Covered	10 major Indian cities
Restaurant Types	Cloud Kitchen, Cafe, Food Truck, QSR, Casual Dining, Fine Dine
Price Categories	Budget, Mid-Range, Premium, Luxury
Platforms Compared	Swiggy and Zomato
Key Metrics	Revenue, Orders, Ratings, Delivery Time, Commission, Discount, Profit

2.2 Tools & Technologies

- SQL (PostgreSQL/MySQL) — 13 analytical queries for data extraction and aggregation
- Power BI — Interactive dashboard with 6 charts, 4 KPIs, and 4 slicers
- Python + Chart.js — Supplementary visualisation dashboard

3. SQL Analysis — Query Summary

13 SQL queries were written and executed to extract insights across multiple business dimensions. Each query includes result validation against real data output.

3.1 Revenue Analysis

Query 1 — Top 15 Restaurants by Combined Monthly Revenue

Identified the highest-earning restaurants combining revenue from both platforms. All top 15 restaurants are Cloud Kitchens, with Mumbai dominating 9 of the 15 spots. The top performer, Restaurant_99 (Mumbai), earned a combined monthly revenue of ₹8,78,355.

Restaurant	City	Type	Swiggy Rev (₹)	Zomato Rev (₹)	Total Rev (₹)
Restaurant_99	Mumbai	Cloud Kitchen	4,13,475	4,64,880	8,78,355
Restaurant_2414	Lucknow	Cloud Kitchen	3,99,672	4,49,569	8,49,241
Restaurant_811	Bangalore	Cloud Kitchen	3,87,720	4,15,224	8,02,944
Restaurant_88	Mumbai	Cloud Kitchen	3,30,786	4,41,232	7,72,018
Restaurant_14	Mumbai	Cloud Kitchen	3,29,116	4,41,621	7,70,737

Query 2 — Revenue per Order by Restaurant Type

Fine Dine restaurants generate the highest revenue per order (₹708) on both platforms, followed closely by QSR (₹684) and Cafe (₹663). Cloud Kitchens, despite their high volume, have the lowest revenue per order (₹618).

Restaurant Type	Swiggy Rev/Order (₹)	Zomato Rev/Order (₹)
Fine Dine	708	708
QSR (Quick Service)	684	684
Cafe	663	662
Food Truck	656	657
Casual Dining	623	620
Cloud Kitchen	618	617

3.2 Profitability Analysis

Query 3 — Average Net Profit by Price Category

Luxury restaurants are the most profitable segment with an average combined net profit of ₹4,14,600 — 7 times greater than Budget restaurants. The profit gap between Premium and Mid-Range is significant at nearly ₹1.38 lakhs.

Price Category	Swiggy Avg Profit (₹)	Zomato Avg Profit (₹)	Combined Avg (₹)
Luxury	2,07,300	2,07,300	4,14,600
Premium	1,43,007	1,43,283	2,86,290
Mid-Range	73,396	74,532	1,47,928
Budget	30,129	29,976	60,105

Query 4 — Commission Rate vs Net Profit Correlation

The analysis shows no strong linear relationship between commission rates and net profit. Restaurants across different commission brackets (12–28%) show relatively stable average profits, suggesting other factors like cuisine type, location, and order volume are more significant profit drivers.

3.3 Platform Performance Analysis

Query 5 — Platform Winner Breakdown by City

Zomato wins more restaurant comparisons in 8 of the 10 cities analysed. Delhi is the only city where Swiggy clearly leads. Jaipur and Lucknow are perfectly tied.

City	Swiggy Wins	Zomato Wins	Total	Leader
Delhi	202	176	380	Swiggy
Mumbai	210	234	450	Zomato
Bangalore	194	218	420	Zomato
Hyderabad	113	125	240	Zomato
Pune	117	130	250	Zomato
Jaipur	60	60	120	Tied
Lucknow	49	49	100	Tied

Query 6 — Average Market Share by Restaurant Type

Cloud Kitchens are the only restaurant type where Swiggy holds a dominant majority share (64.6%). For Fine Dine and Casual Dining, Zomato holds a slight majority. QSR, Cafe, and Food Truck are more balanced, with Swiggy holding a marginal lead.

Restaurant Type	Swiggy Share (%)	Zomato Share (%)
Cloud Kitchen	64.6	35.4
Cafe	55.3	44.7
Food Truck	55.0	45.0
QSR (Quick Service)	54.5	45.5
Casual Dining	47.7	52.3
Fine Dine	47.4	52.6

Query 7 — Restaurants Where Swiggy Revenue Exceeds Zomato by 20%+

19 restaurants were identified where Swiggy revenue exceeds Zomato by 20% or more. These are spread across Bangalore, Mumbai, Hyderabad, Jaipur, Pune, Delhi, and Chennai — spanning a variety of restaurant types including Cloud Kitchen, Fine Dine, QSR, and Food Truck.

3.4 Ratings Analysis

Query 8 — Top 15 Highest Rated Restaurants (Average Both Platforms)

Restaurant_316 (Mumbai, Biryani) leads with the highest average rating of 4.9 across both platforms. Mumbai dominates the top 15 with 5 entries. Top-rated restaurants are spread across a variety of cuisines including Biryani, Lebanese, Multi-Cuisine, Cafe, and Desserts.

Query 9 — Largest Rating Gap Between Platforms

The maximum rating gap observed is 1.8 points, seen in Restaurant_1628 (Hyderabad, Swiggy higher) and Restaurant_2370 (Jaipur, Zomato higher). In most cases of large rating gaps, Zomato tends to have the higher rating — 11 of the top 14 rating gap cases favour Zomato.

Query 10 — Average Rating by City and Restaurant Type

Bangalore Fine Dine has the highest average combined rating of 4.09. Ahmedabad Casual Dining and Lucknow QSR follow closely at 4.08 and 4.07 respectively. Overall, average ratings cluster tightly between 3.90 and 4.10 across all city-type combinations.

3.5 Delivery & Operations Analysis

Query 11 — Average Delivery Time by Distance Bucket

Delivery times scale predictably with distance and are nearly identical between Swiggy and Zomato across all buckets. Restaurants within 2 km average 26-27 minutes, while those 10 km+ away average nearly 50 minutes.

Distance Bucket	Swiggy Avg (mins)	Zomato Avg (mins)
0 – 2 km	26.9	26.7
2 – 5 km	31.4	31.5
5 – 10 km	39.6	39.2
10+ km	49.4	49.5

3.6 Discount & Compliance Analysis

Query 12 — High Discount Restaurants vs Revenue

Restaurants with high discount frequency on both platforms (25%+) earn the highest average revenues. However, the margin difference compared to low-discount restaurants is modest (~₹35,000), suggesting discounting drives volume but not significantly higher margins.

Query 13 — Food License Compliance vs Revenue and Rating

Interestingly, non-verified restaurants show marginally higher average revenue (₹2,61,935 vs ₹2,58,124) and an identical average rating (4.00 vs 3.99) compared to verified ones. This suggests food license verification does not significantly impact business performance in the dataset.

3.7 Cuisine Analysis

Most Popular Cuisines by Total Monthly Orders

Biryani leads all cuisines with 34,627 combined monthly orders, followed by Street Food (34,112) and Bakery (32,600). Mediterranean and Korean cuisine round out the top 5. Vietnamese is the least popular with 17,578 orders.

Cuisine	Total Orders	Avg Rating
Biryani	34,627	4.02
Street Food	34,112	3.99
Bakery	32,600	4.02
Mediterranean	30,947	3.99
Korean	29,601	3.98
Cafe	28,749	4.02
Seafood	27,957	3.93
North Indian	27,451	4.03

4. Power BI Dashboard

The Power BI dashboard translates all SQL outputs into an interactive, filterable business intelligence tool. It is structured around 4 KPIs, 6 charts, and 4 slicers.

4.1 KPIs (Key Performance Indicators)

KPI Name	Value	Insight
Total Restaurants	2,500	Across 10 cities
Top Revenue (Combined)	₹8,78,355	Restaurant_99, Mumbai — Cloud Kitchen
Luxury Avg Profit	₹4,14,600	7x higher than Budget segment
Swiggy Cloud Kitchen Share	64.6%	Highest platform dominance by type

4.2 Charts

#	Chart Name	Chart Type	Key Insight
1	Swiggy vs Zomato wins per city	Grouped Bar	Delhi favours Swiggy; Zomato leads most cities
2	Market share by restaurant type	Horizontal Bar	Cloud Kitchens heavily favour Swiggy (64.6%)
3	Avg profit by price category	Bar Chart	Luxury earns 7x over Budget
4	Delivery time by distance	Line Chart	Both platforms nearly identical
5	Top cuisines by total orders	Horizontal Bar	Biryani and Street Food dominate
6	Avg revenue per order by type	Grouped Bar	Fine Dine leads at ₹708 per order

4.3 Slicers (Interactive Filters)

Slicer Name	Filter Type	Purpose
City	Multi-select dropdown	Filter all visuals by city
Restaurant Type	Multi-select dropdown	Filter by Cloud Kitchen, Fine Dine, etc.

Slicer Name	Filter Type	Purpose
Price Category	Single/Multi select	Filter by Budget, Mid-Range, Premium, Luxury
Platform	Toggle / Button	Switch between Swiggy, Zomato, or Both

5. Key Business Insights & Recommendations

5.1 Platform Strategy

- Swiggy should double down on Cloud Kitchen partnerships — its 64.6% market share signals a clear structural advantage in this segment.
- Zomato should leverage its Fine Dine and Casual Dining dominance by offering premium discovery features and curated dining experiences.
- Delhi is a critical battleground city — Swiggy leads here and should invest in maintaining that edge with targeted promotions.

5.2 Revenue & Profitability

- Luxury and Premium segments offer the highest profit margins — restaurants in these tiers should be prioritised for marketing spend and platform features.
- Cloud Kitchens, despite their volume, have the lowest revenue per order (₹618). Upselling strategies and combo offerings could improve this metric.
- High discount strategies drive order volumes but have limited profit impact — a data-driven discount optimisation approach is recommended.

5.3 Operations & Delivery

- Both platforms perform equally well on delivery times — competitive differentiation needs to come from service quality and reliability rather than speed alone.
- Restaurants beyond 10 km average nearly 50 minutes delivery time — a logistics partnership or dark store strategy could help reduce this.

5.4 Cuisine & Menu Strategy

- Biryani and Street Food are the top-performing cuisines — new Cloud Kitchen launches should consider these as primary offerings.
- Vietnamese and Thai cuisines have lower order volumes but maintain average ratings above 3.94 — there may be a premium niche opportunity here.

6. Conclusion

This analysis demonstrates the power of combining SQL-based data extraction with Power BI visualisation to derive actionable business intelligence from a large restaurant dataset. The 13 SQL queries provided a thorough multi-dimensional view of the Swiggy vs Zomato landscape, while the Power BI dashboard made these insights interactive and accessible to stakeholders.

The findings reveal a nuanced competitive landscape where neither platform dominates across all dimensions. Swiggy holds a significant advantage in Cloud Kitchens and Delhi, while Zomato leads in Fine Dine, Casual Dining, and most other cities. Profitability is strongly tied to price category, and delivery performance is effectively a draw between the two platforms.

The insights from this project can directly inform platform strategy, restaurant partner acquisition, marketing spend allocation, and operational improvements for both Swiggy and Zomato.
