

What Is This Dataset?

This dataset is a comparative analysis dataset of 2,500 restaurants that are listed on both Swiggy and Zomato across 10 major Indian cities.

The main objective of this project is to analyze and compare how the same restaurant performs on both food delivery platforms in terms of:

- Ratings
- Reviews
- Orders
- Revenue
- Profit
- Delivery performance
- Market share
- Customer engagement

This dataset helps in understanding which platform gives better business performance for restaurants and what factors affect restaurant growth on online delivery platforms.

Column Groups Explained

1. Restaurant Details (6 Columns)

This section contains the basic information about each restaurant.

restaurant_id / restaurant_name

- Every restaurant has a unique ID and restaurant name for identification purposes.

city

- Shows the city where the restaurant operates.
- The dataset contains restaurants from:
 - Mumbai
 - Bangalore
 - Delhi
 - Pune
 - Hyderabad
 - Chennai
 - Kolkata
 - Ahmedabad
 - Jaipur

- Lucknow

locality

- Represents the exact area or neighborhood within the city where the restaurant is located.
- This helps in location-based analysis and understanding customer demand in different areas.

restaurant_type

- Defines the type of restaurant business.
- Categories include:
 - Cafe
 - Casual Dining
 - Fine Dine
 - Cloud Kitchen
 - Food Truck
 - QSR (Quick Service Restaurant)
- This column is useful for comparing how different restaurant types perform on Swiggy and Zomato.

cuisines

- Shows the type of food served by the restaurant.
 - Some restaurants serve multiple cuisines like:
 - North Indian
 - Chinese
 - Italian
 - South Indian
 - Fast Food
 - This helps in cuisine popularity analysis.
-

2. Operations Details (4 Columns)

This section contains restaurant operational information.

opening_time / closing_time

- Represents the daily opening and closing timings of the restaurant.
- Useful for analyzing restaurant availability and customer ordering patterns.

days_operational

- Shows how many days the restaurant has been operating since it was listed.

- Helps in understanding restaurant experience and stability.

listing_date / days_listed

- **listing_date** shows when the restaurant was first added to the platforms.
 - **days_listed** shows the total number of days since listing.
 - These columns help analyze whether older restaurants perform better than newly listed restaurants.
-

3. Ratings and Reviews (5 Columns)

This section measures customer satisfaction and engagement.

swiggy_rating / zomato_rating

- Customer ratings given on both platforms.
- Ratings range from 1 to 5.
- Higher ratings generally indicate better customer satisfaction and service quality.

swiggy_total_reviews / zomato_total_reviews

- Shows the total number of reviews received on each platform.
- Restaurants with more reviews usually have higher customer engagement and trust.

average_rating_both_platforms

- Calculates the combined average rating from both Swiggy and Zomato.
 - Helps in identifying overall restaurant quality across platforms.
-

4. Pricing Details (3 Columns)

This section explains restaurant pricing and delivery charges.

avg_cost_per_person_inr

- Represents the average meal cost per person in Indian Rupees.
- Useful for analyzing customer affordability and spending behavior.

price_category

- Restaurants are grouped into pricing categories:
 - Budget
 - Mid-Range
 - Premium
 - Luxury
- Helps compare performance based on pricing levels.

swiggy_delivery_fee_inr / zomato_delivery_fee_inr

- Shows delivery charges paid by customers on both platforms.
 - Useful for studying how delivery charges affect customer orders.
-

5. Delivery Performance (2 Columns)

This section focuses on delivery efficiency.

swiggy_avg_delivery_time_minutes / zomato_avg_delivery_time_minutes

- Represents the average delivery time in minutes from order placement to customer delivery.
 - Faster delivery usually improves customer satisfaction and increases repeat orders.
 - This column also helps compare delivery efficiency between Swiggy and Zomato.
-

6. Business Economics (6 Columns)

This section contains business and operational metrics.

swiggy_platform_commission_pct / zomato_platform_commission_pct

- Shows the percentage commission charged by the platforms from restaurants on every order.
- Commission rates generally range between 12% to 28%.
- Helps understand platform charges and profitability impact.

swiggy_discount_frequency_pct / zomato_discount_frequency_pct

- Indicates how frequently restaurants provide discounts and promotional offers.
- Useful for analyzing marketing strategies and customer attraction methods.

swiggy_estimated_monthly_orders / zomato_estimated_monthly_orders

- Represents the estimated monthly order volume on each platform.
 - Higher orders usually indicate better platform performance and customer demand.
-

7. Revenue and Profitability (4 Columns)

This section measures restaurant financial performance.

swiggy_estimated_monthly_revenue_inr / zomato_estimated_monthly_revenue_inr

- Represents estimated monthly revenue generated from each platform.
- Helps identify which platform generates higher business revenue.

swiggy_estimated_net_profit_inr / zomato_estimated_net_profit_inr

- Represents estimated net profit after deducting:
 - Platform commissions

- **Operational costs**
 - **Delivery-related expenses**
 - **Useful for profitability comparison between platforms.**
-

8. Market Performance (3 Columns)

This section compares overall business contribution from both platforms.

swiggy_market_share_pct / zomato_market_share_pct

- **Represents the percentage contribution of total restaurant orders from each platform.**
- **The combined market share always equals 100%.**

platform_performance_better

- **Final comparison label showing which platform performs better for the restaurant:**
 - **Swiggy Better**
 - **Zomato Better**
 - **Balanced**
 - **This column helps in quick platform performance evaluation.**
-

9. Amenities and Verification (5 Columns)

This section contains additional restaurant facilities and verification information.

amenities

- **Shows facilities available at the restaurant such as:**
 - **WiFi**
 - **Parking**
 - **Rooftop Seating**
 - **Live Music**
 - **Dine-in**
- **Helps analyze customer experience and restaurant attractiveness.**

amenities_count

- **Represents the total number of facilities available in the restaurant.**

has_own_website / has_own_app

- **Indicates whether the restaurant has its own website or mobile application for direct online ordering.**
- **Useful for analyzing restaurant digital presence outside Swiggy and Zomato.**

food_license_verified

- Indicates whether the restaurant's food safety license is verified.
 - Helps measure restaurant authenticity and customer trust.
-

10. Outlier Flags (4 New Columns)

These columns were added during data cleaning and preprocessing.

swiggy_revenue_outlier_flag / zomato_revenue_outlier_flag

- Identifies restaurants with unusually high or low revenue values compared to other restaurants.
- These values are marked using the IQR (Interquartile Range) method.
- Useful for detecting abnormal business performance.

swiggy_orders_outlier_flag / zomato_orders_outlier_flag

- Identifies restaurants with unusually high or low monthly order volumes.
 - Helps in identifying highly popular or underperforming restaurants.
-

Key Insights from the Dataset

- The dataset contains no missing values, making it clean and reliable for analysis.
- Delivery fees are almost identical on both platforms for the same restaurant.
- Platform commission rates are also very similar, averaging around 20%.
- Zomato performs better for more restaurants individually, but Swiggy holds a higher overall market share.
- Delivery distance strongly affects delivery time. Longer distances generally increase delivery time.
- Luxury restaurants generate significantly higher revenue compared to budget restaurants.
- Restaurants with higher ratings and better amenities generally receive more orders and better profits.
